

**CONSISTENCY  
AND CONVENIENCE.  
WE PUT IT ALL  
TOGETHER SO YOU  
DON'T HAVE TO.**

## PORTFOLIO OF ORAL CARE SOLUTIONS FOR BOTH Q4 AND Q2 PROTOCOLS

- Avanos is addressing the known risk factors for VAP by offering a complete portfolio of Oral Care Kits, individual components and packs designed by nurses, for nurses, to support both individual patient needs and hospital oral care protocol.
- AVANOS\* Oral Care Kits are complete with everything needed to provide comprehensive and consistent oral care, recognized as critical for preventing VAP by such leading healthcare organizations as the CDC<sup>1</sup>, and AACN<sup>2</sup>.

**Now Available:** Avanos Medical has designed a kit that provides comprehensive oral care for non-vented, or intermittently vented patients that are unable to perform oral care independently.

## AVANOS\* ORAL CARE KITS FEATURE:

- Innovative Self-Cleaning Covered Yankauer With BALLARD\* technology
- Ergonomically Designed Suction Handle
- Y-Connector for Single Suction Canister Use
- 4 Suction Swab Procedure Packs with mint-flavored 1.5% H<sub>2</sub>O<sub>2</sub> and mouth moisturizer
- 2 Toothbrush Procedure Packs with antiplaque solution and mouth moisturizer
- 2 Flexible Suction Catheters
- 6 Suction Swab Packs with Alcohol-Free Mouthwash - Available in the Oral Care q2 Kit only

## AVANOS\* ORAL CARE KITS ARE AVAILABLE WITH CHG

- CHG Oral Rinse, 0.12%, is available for oral care protocols that require CHG twice daily. Cup label includes barcode for easy scanning and documentation.

**Additional Avanos\* Oral Care products available to meet the needs of your patients include:**

- AVANOS\* Oral Care Kits and Components
- AVANOS\* Swabs

The Avanos\* Oral Care Kit is just one of the clinical solutions that you can depend on to meet the demands of your fast-paced world.

**Based on nurses' input, our q2 kit also features an "Order of Use Guide" right on the package, taking the guess work out of providing oral care.**

### ASSISTED ORAL CARE KITS INCLUDE:

† Rx Only

†† Same components as in AVANOS\* 24-hour Oral Care Kit Code #97021

1. CDC. Guidelines for Preventing Healthcare-Associated Pneumonia, 2003. Recommendations of the CDC and the Healthcare Infection Control Practices Advisory Committee. MMWR 2004; 53 (No. RR-3)
2. AACN News Vol. 23 No. 8 Aug 2006

**INDICATIONS FOR USE:** Chlorhexidine Gluconate Oral Rinse, 0.12% is indicated for use between dental visits as part of a professional program for the treatment of gingivitis as characterized by redness and swelling of the gingivae, including gingival bleeding upon probing. Chlorhexidine Gluconate Oral Rinse, 0.12% has not been tested among patients with acute necrotizing ulcerative gingivitis (ANUG). For patients having coexisting gingivitis and periodontitis. See package insert for complete prescribing information. **CONTRAINDICATIONS** Chlorhexidine Gluconate Oral Rinse, 0.12% should not be used by persons who are known to be hypersensitive to chlorhexidine gluconate or other formula ingredients. **ADVERSE REACTIONS** The most common side effects associated with chlorhexidine gluconate oral rinses are 1) an increase in staining of teeth and other oral surfaces; 2) an increase in calculus formation; and 3) an alteration in taste perception, see **WARNINGS** and **PRECAUTIONS** in package insert. Oral irritation and local allergy-type symptoms have been spontaneously reported as side effects associated with

use of chlorhexidine gluconate rinse. The following oral mucosal side effects were reported during placebo-controlled adult clinical trials: aphthous ulcer, grossly obvious gingivitis, trauma, ulceration, erythema, desquamation, coated tongue, keratinization, geographic tongue, mucocele, and short frenum. Each occurred at a frequency of less than 1.0%. Among post-marketing reports, the most frequently reported oral mucosal symptoms associated with chlorhexidine gluconate oral rinse, 0.12% are stomatitis, gingivitis, glossitis, ulcer, dry mouth, hypesthesia, glossal edema, and paresthesia. Minor irritation and superficial desquamation of the oral mucosa have been noted in patients using chlorhexidine gluconate oral rinse, 0.12%. There have been cases of parotid gland swelling and inflammation of the salivary glands (sialadenitis) reported in patients using chlorhexidine gluconate oral rinse. **WARNINGS** The effect of Chlorhexidine Gluconate Oral Rinse, 0.12% on periodontitis has not been determined. An increase in supragingival calculus was noted in clinical testing in users of chlorhexidine gluconate oral rinse compared with control users. It is not known if chlorhexidine gluconate use results in an increase in subgingival calculus. Calculus deposits should be removed by a dental prophylaxis at intervals not greater than six months. Hypersensitivity and generalized allergic reactions
